- Profile of *Operations Manager, Magnet Science and Technology, NHMFL*
- Initial results in response to NHMFL needs
- Basic Business Functions and Governance
- Ongoing cultural challenges
- Lessons learned and ideas to secure a long-term future
- Summary

A brief history...

- August, 1990: NSF awards National High Magnetic Field Laboratory to Florida State University
- 1990-1994: Lab's main campus – a 330,000-square-foot complex – constructed in Tallahassee
- October, 1994: Magnet Lab dedicated; Vice President Al Gore is the keynote speaker
- 2000: Al Gore returns to Tallahassee under very different circumstances!

NSF Charge:

- To provide the **highest magnetic fields** and necessary services for scientific research conducted by **users** from a **wide range of disciplines**, including physics, chemistry, materials science, engineering, biology, and geology
- To advance **magnet technology** and U.S. competitiveness
- To enhance **science education** at all levels

Number of Users

Magnet Lab Users

Publications

Peer-Reviewed Publications

Personnel and Budget

- Employ more than 400 faculty, staff and students at FSU branch
 - 78 graduate students
 - 43 postdoctoral associates
 - 38 undergraduate students
- International work force

- \$26.5 M “Core Grant” from the NSF
- ~ \$10 M funded by the State of Florida
- \$10-15 M from individual investigator grants

Agenda

- Overview of National High Magnetic Field Laboratory (NHMFL)
- NHMFL management needs and challenges identified in 2001
- Profile of *Operations Manager, Magnet Science and Technology, NHMFL*
- Initial results in response to NHMFL needs
- Basic Business Functions and Governance
- Ongoing cultural challenges
- Lessons learned and ideas to secure a long-term future
- Summary

Management Needs and Challenges identified in 2001

■ NSF Site Review Committee....

Major magnet project(s) behind schedule and over budget....Need to recruit appropriate staff to resolve issues associated with completion of major magnet projects....

Agenda

- Overview of National High Magnetic Field Laboratory (NHMFL)
- NHMFL management needs and challenges identified in 2001
- *Profile of Operations Manager, Magnet Science and Technology, NHMFL*
- Initial results in response to NHMFL needs
- Basic Business Functions and Governance
- Ongoing cultural challenges
- Lessons learned and ideas to secure a long-term future
- Summary

Profile of *Operations Manager, Magnet Science and Technology*

- Hired April 1, 2001
- More than 30 years national and international experience with Fortune 100 companies
- Certified Professional Manager (CPM)
- Presided over restructuring and turnaround operations that required plant closings and personnel reassignments
- Direct responsibility for overall management of strategic planning, marketing, sales, program management, R&D, engineering, contracts, purchasing, subcontracts and administrative activities

Agenda

- Overview of National High Magnetic Field Laboratory (NHMFL)
- NHMFL management needs and challenges identified in 2001
- Profile of *Operations Manager, Magnet Science and Technology, NHMFL*
- Initial actions and results in response to NHMFL needs
- Basic Business Functions and Governance
- Ongoing cultural challenges
- Lessons learned and ideas to secure a long-term future
- Summary

Initial results in response to NHMFL needs

■ Actions...

- Assumed authority over Magnet Science & Technology (MS&T) resources
- Provided monthly status reports to the Program Manager at NSF
- Requested monthly status reports for all MS&T projects
- Terminated a major subcontract for default
- Rigorously monitored use of all resources
- Re-assigned staff to highest priority project

■ Results...

Initial results....

MAGNET LAB SITE VISIT REPORT, MAY 13-15, 2002

*“... Managing this mix of projects will put a premium on **improved business and management practices**. The Laboratory has taken a major first step in this direction with the hiring of an “operations manager” having business management experience in the aerospace industry. The Committee was impressed with the new procedures being introduced for initiating and tracking magnet construction projects.*

Recommendations

- *We **strongly endorse the new focus on project planning**. We also support the management decision to bring the 900 MHz project to closure whatever the outcome of the forthcoming tests.*

The New Management Plan (for Project Management)

- *The Committee was pleased with the recent implementation of “**Best Practices**” management tools. Dividing the project into pre-conceptual, conceptual, engineering and fabrication stages will allow for assessment of risk and contingency, monitoring progress and adjusting budget and schedule priorities during the course of the project.....”*

Agenda

- Overview of National High Magnetic Field Laboratory (NHMFL)
- NHMFL management needs and challenges identified in 2001
- Profile of *Operations Manager, Magnet Science and Technology, NHMFL*
- Initial actions and results in response to NHMFL needs
- **Basic Business Functions and Governance**
- Ongoing cultural challenges
- Lessons learned and ideas to secure a long-term future
- Summary

Basic Business Functions and Governance

Ongoing improvements since late 2002...

- Develop a Strategic Plan (Director and Scientific Staff)
- Develop a Management and Administration Plan
- Develop an Organization Chart
- Create internal and external communication channels
- Organize the management and administration of human resources
- Organize the management and administration of financial resources
- Organize purchasing and logistics services
- Organize facilities and site management
- Organize EH&S
- Organize other general services

Basic Business Functions and Governance

Ongoing improvements since late 2002...

- Develop a Strategic Plan (Director and Scientific Staff)
- **Develop a Management and Administration Plan**
- Develop an Organization Chart
- Create internal and external communication channels
- Organize the management and administration of human resources
- Organize the management and administration of financial resources
- Organize purchasing and logistics services
- Organize facilities and site management
- Organize EH&S
- Organize other general services

Develop a Management and Administration Plan

- Focus on Charge from the NSF
 - enhanced services from Management and Administration
- Keep it simple
- Must be convertible into a flow chart that shows how the work gets done
 - NSF, FSU, sub-awardees and subcontractors
- Used to review operational effectiveness
 - Results rather than activity, organizational vs. individual indicators...in the eyes of our "customers"

Mag Lab Org Chart 2004

Validation of the Management and Administration Plan

May 2004 email to Brian Fairhurst from NSF Program Officer for oversight of the NHMFL

"I am especially grateful to you for the badly needed management expertise you have brought to the Lab and for the very collegial way you have gone about reforming the entire suite of management activities.

*I very much doubt that the 900 MHz magnet would be undergoing commissioning now if it had not been for the **discipline** you brought to this project."*

*Hugh Van Horn
NSF Program Officer
(Retired May 2004)*

Analysis of Basic Business Functions and Governance

Ongoing improvements since late 2002...

- Develop a Strategic Plan (Director and Scientific Staff)
- Develop a Management and Administration Plan
- Develop an Organization Chart
- **Create internal and external communication channels**
- Organize the management and administration of human resources
- Organize the management and administration of financial resources
- Organize purchasing and logistics services
- Organize facilities and site management
- Organize EH&S
- Organize other general services

Create internal and external communications channels

- Recommended "All-hands" meetings, FSU Staff Meetings, "Random Employee Lunches" and "From the Director's Desk" emails to new Director
- Recommended monthly telephone call between Director, Associate Director and NSF Program Officer
- Developed and introduced "MagNet"
- Enhanced Educational Programming
- Overhaul of NHMFL website – internet and intranet
- Active leadership of outreach activities – Open House, lab tours w/VIP's, newspaper editorial board, Leadership Tallahassee, Economic Development Council, Issues in Education TV Program, American Cancer Society Relay for Life
- Bi-weekly 1-on-1 meetings with my direct reports
- Birthday lunches with all direct reports

Magnet Lab in the news, on the air, and on the Web

While the scientists are charged with establishing and protecting the lab's reputation in the scientific community, the lab's Public Affairs group is charged with doing the same in the general public. Media outreach is more than good "PR" – if kids don't read or hear about scientists in the news, they may not see science as a viable career option.

Print highlights

The lab enjoys strong editorial support in the capital city's newspaper, with four supportive editorials in 2006 alone. Lab research and activity is regularly featured in university publications and on section fronts of the newspaper.

Strong editorial support

- Jan. 17, 2006:
"Cosmic questions: Mag Lab pursues universe's secrets"
- Feb. 17, 2006:
"Come see: Mag lab needs groupies"
- May 14, 2006:
"Innovating: Successful future depends on it"
- July 27, 2006:
"Only logical: FSU-Scripps a fitting alliance"

Front-page news

- Oct. 6, 2005:
"FSU lands superconductor lab"
- Jan. 17, 2006:
"Mag lab to study comet dust"
- Jan. 9, 2006:
"Magnet research pulls scientists to Florida site"
- Feb. 16, 2006:
"Mag lab staying put at least through 2012"
- Feb. 21, 2006:
"Scientists digging in to dust snatched from comet"
- June 26, 2006:
"FSU is learning to lure scholars"
- Sept. 27, 2006:
"Major grant awarded to mag lab"
- Oct. 18, 2006:
"Mag lab has millions in mind"
- Dec. 2, 2006:
"FSU professor takes close look at influenza virus"

Broadcast highlights

- The lab is the subject of a 30 minute documentary to air statewide on Florida Public Television.
- "UF-FSU Same Team" – this 30 second video piece put the lab in front of a nontraditional audience (sports fans) and emphasized research excellence at the lab's two Florida sites.
- Director Gregory S. Boebinger and the lab are featured in FSU's Institutional Spot, which airs during every nationally televised FSU game.
- News of the commissioning of the 900 megahertz magnet made news worldwide, and was even referenced on "The David Letterman Show."
- A piece on the lab's research on the Wild2 comet dust was featured on National Public Radio's "All Things Considered" in December of 2006.

A growing presence online

- "Raiders of the Lost Dimension" – news about condensed matter physics research – was all over the Internet. The news was picked up by Fox News, and versions of it appeared on well-read science blogs such as Atomic Surgery and Science A Go-Go.
- Coverage of the 100 T at Los Alamos appeared in online versions of The Washington Post, CNN, CBS News and much more.
- The Magnet Lab climbed its way up Google rankings and now consistently ranks as the top search return. This is a direct result of the increase in and consistency of the news coming out of the lab.
- The lab's ramped up Education Web site is an excellent and growing outreach tool that will bring lab resources to a much broader audience. www.education.magnet.fsu.edu
- Web site redesign is aimed at broadening the lab's appeal to the general public.

The Magnet Lab's success depends in part on the degree to which its targeted "publics" support its goals and policies.

Flux Magazine

What is This?

A look inside magnet probes

By Amy Mott

From the side, a magnet looks like a giant soda can. From the top, it looks like a giant hole. The hole in the middle of the cylinder is the place where scientists put samples. But how do you place a sample inside a hole that, on some magnets, is the size of a grape?

The answer is: you don't. The probes are built by hand. Building a probe is such a delicate, research-intensive work that when building new kinds of probes, the lab companies only build a few per year.

"It means we're putting together something we haven't done before," said Bill Ray, an engineer in the lab's Nuclear Magnetic Resonance group.

The probes must be built whole out of non-magnetic parts, some of which are machined from scratch in the lab's machine shop, some of which are purchased from companies that sell parts for MRI equipment.

As complex as the construction of a probe can be, once they're complete, they're easy enough for visiting scientists from many different fields of study to use.

In addition to the probes built by Magnet Lab engineers, visiting scientists often bring their own probes. But whether it's a probe of the old Mag Lab probe or a commercially produced product, you can't do research in high magnetic fields without one.

Kitchen Table Science

Learn how to reveal the iron hidden in your food

By Kristen Coyne and Amy Mott

You may think of it largely in terms of lean meats and vitamins, but iron is everywhere. Not only is iron the fourth most common element in the earth's crust, it's also an essential part of our own blood.

Many foods contain iron, which blood cells need in order to carry oxygen. A protein called hemoglobin in the red blood cells carries oxygen to the body, where oxygen concentration is high, allowing the body to breathe. The oxygen is delivered to the cells by hemoglobin, which is then released to the cells.

Because iron is so important to your body, you need to make sure you get enough in your diet. You may have heard about iron and spinach being rich in iron, but do you know where else it's hidden? (Hint: it's in many of the foods you eat every day.)

Iron is naturally magnetic, and even though your blood contains iron, you can't get a refrigerator magnet to stick to you. That's because the iron in your blood is spread out into particles too small to get the magnet to stick.

You can, however, use a magnet to separate the iron contained in some iron-rich foods. What's the best food to use for this experiment?

What you'll need:

- ▶ Cereal or other food with iron (Total Cereal or Golden Grahams are good choices)
- ▶ A Ziploc bag
- ▶ A little water
- ▶ A plastic, one-litre cup
- ▶ A magnet

WHAT YOU'LL DO:

4 After the cereal mixture has been allowed to sit, pour some into a plastic cup.

5 Move a strong magnet against the side of the cup for about a minute. You should observe iron particles collecting on the side of the cup!

DID YOU KNOW?

- ▶ People without enough hemoglobin in their blood have a condition called anemia. The most common symptoms of anemia are weakness and fatigue.
- ▶ All of the blood in your whole body contains about 2.5 grams of iron - about the weight of a single paperclip. It's amazing that such a small amount can be so important!
- ▶ A healthy adult male has about 4 grams of iron in his body. A healthy adult female has about 3 grams. The body stores iron in the liver and spleen. If you have a blood test, you can find out how much iron you have in your body.

Cost Reduction Project

The Cost Reduction Project is designed to get employees thinking about ways to trim expenses, and will be used to recognize employees for innovative and cost-saving ideas and efforts. Successful projects will be shared with the lab, and can be used as criteria for employee evaluation and future merit raise considerations.

Just download and fill out the [Cost Reduction Project PDF](#), then e-mail it to Jennifer Brown (jbrown@magnet.fsu.edu) with a CC to your supervisor.

If you have any questions about the Cost Reduction Project, please contact Judy McEachern at [850-644-8754](tel:850-644-8754) or jmceachern@magnet.fsu.edu.

Annual Open House

- More than 5,500 attendees from the Southeast in 2009!
- Outreach directed at underrepresented groups past two years has increased attendance by more than 1,000
- Demonstrations
- Hands-on activities
- Geared toward all ages

Economic Impact

- For every \$1 the state invests in lab, \$5.50 is generated in the Florida economy
- Lab brings between 800 and 1,000 visiting scientists from around the world to Tallahassee each year; 20 percent international
- Accounted for more than 3,000 hotel room nights in 2008; many visitors stay for more than a week

Analysis of Basic Business Functions and Governance

Ongoing improvements since late 2002...

- Develop a Strategic Plan (Director and Scientific Staff)
- Develop a Management and Administration Plan
- Develop an Organization Chart
- Create internal and external communication channels
- **Organize the management and administration of human resources**
- Organize the management and administration of financial resources
- Organize purchasing and logistics services
- Organize facilities and site management
- Organize EH&S
- Organize other general services

Organize the Management and Administration of Human Resources

- Establish high performance standards via comprehensive performance evaluations
- Measure and reward employees based on their evaluations
- Delegate authority, responsibility, decision-making, control, accountability and VISIBILITY as far down the organization as practical.
- Simplify and standardize whenever possible...search for more productive ways of doing things
- Conspicuous posting of office hours
- Be alert for unused or underutilized resources
- Don't ignore low producers and deadwood...at all levels and in all organizations
- Be willing to work harder than everyone else on your team!

Cost Reduction

Analysis of Basic Business Functions and Governance

Ongoing improvements since late 2002...

- Develop a Strategic Plan (Director and Scientific Staff)
- Develop a Management and Administration Plan
- Develop an Organization Chart (Primarily Director and Scientific Staff)
- Create internal and external communication channels
- Organize the management and administration of human resources
- **Organize the management and administration of financial resources**
- Organize purchasing and logistics services
- Organize facilities and site management
- Organize EH&S
- Organize other general services

Organize the Management and Administration of Financial Resources

- Diversification of funding sources to maintain critical resources. Cash flow is everything!
- Appropriate use of a local shadow system for financial management with links to budgets, personnel and purchasing – particularly for multiple projects and multiple funding sources

Organize the Management and Administration of Financial Resources

Intranet Demo..

Analysis of Basic Business Functions and Governance

- Ongoing improvements since late 2002...
- Develop a Strategic Plan (Director and Scientific Staff)
- Develop a Management and Administration Plan
- Develop an Organization Chart
- Create internal and external communication channels
- Organize the management and administration of human resources
- Organize the management and administration of financial resources
- Organize purchasing and logistics services
- **Organize facilities and site management**
- Organize EH&S
- Organize other general services

Organize Facilities and Site Management

- Develop positive relationships with other stakeholders
 - University - formal review and prioritization of major and minor projects
 - Major Suppliers – contingency plans that will prevent or minimize the loss of scientific productivity
- Employee turnover happens! Develop and maintain procedures and other information
- Maintain an awareness of the many unsung heroes and recognize them!

About electricity...

- Monthly electric bill runs between \$300,000 and \$590,000 a month! During peak usage, Mag Lab consumes 7% of the City of Tallahassee's electricity
- Work with city to balance consumption

Energy Reduction

Energy Reduction – Recent Actions

- Installed variable speed air compressors in utility plant during 2009
- Replaced an oversized, malfunctioning vacuum pump with a smaller more efficient unit during 2009
 - Old : 40hp, Ran Constantly
 - (Annual Electrical Cost \$26,280)
 - New: 5 Hp, only 170 hrs in 2 months
 - (Annual Electric Cost \$377)

Recycling at the NHMFL

- Started in July 2006
- Existing recycling program had failed because we could not consistently get the materials to a location for FSU recycling to pick it up
- 2 staff members 1.5 hours/week to collect paper, plastic, glass, aluminum, cardboard, scrap metal

Recycling at the NHMFL

Totals 2006-2008

■ PAPER	43,588 LBS
■ PLASTIC, GLASS, ALUMINUM	4,657 LBS
■ MAGAZINES	5,078 LBS
■ SCRAP METAL	23,498 LBS
■ CARDBOARD	17,926 LBS

Recycling – Lessons Learned

- Need a champion
- Don't give up!
 - It sometimes takes several attempts to get a lower energy solution to work
- Local knowledge and communication can make the difference

Analysis of Basic Business Functions and Governance

- Ongoing improvements since late 2002...
- Develop a Strategic Plan (Director and Scientific Staff)
- Develop a Management and Administration Plan
- Develop an Organization Chart
- Create internal and external communication channels
- Organize the management and administration of human resources
- Organize the management and administration of financial resources
- Organize purchasing and logistics services
- Organize facilities and site management
- **Organize EH&S**
- Organize other general services

Organize EH&S

- Employee Safety and Security is #1 concern
 - Introduced ID/building access system for employees, users, contractors and visitors
 - Introduced Incident Reports
 - Changed all interior locks
 - Expanded video surveillance
 - Frequent lab inspections ... and follow-up
 - Safety focus – monthly
 - Annual Safety Awards and Safety Partners
 - Capture and report good news and best practices
 - Breathe Easy Zones

Employee Safety & Security

Magnet Lab Eight-Year Injury Data

Includes all injuries requiring any outside medical attention

NUMBER of INJURIES

* Two of the 2007 injuries did not occur at the NHMFL

TYPE of INJURIES

2007 Recordable Injury Rates

The Magnet Lab maintains an injury rate consistent with or below the average for scientific research facilities and universities

- | | |
|---------------------------------------|-----|
| ■ Magnet Lab | 1.8 |
| ■ Scientific Research and Development | 1.8 |
| ■ College and University | 2.6 |

2007 data from US Department of Labor, Bureau of Labor and Statistics
(based on 660,000 total work hours per year)

2008 Excellence in Safety

AWARD RECIPIENTS

Dr. Alexey Suslov - Lab C101C

Dr. Dragana Popovic - Lab C128C

Dr. Eun Sang Choi - Lab 130D

Dr. Greg Boebinger - Lab B325

Irinel Chiorescu - Lab C130A

Michael Davidson - Labs B107, B111 & B113

Dr. Scott Hannahs - Lab OP128

Dr. Stanley Tozer - Labs A110 & C108

Dr. Timothy Cross - Labs NM105 & NM109

Timothy Murphy - Lab OP108

Dr. William Brey - Labs C210 & C212

Analysis of Basic Business Functions and Governance

- Ongoing improvements since late 2002...
- Develop a Strategic Plan (Director and Scientific Staff)
- Develop a Management and Administration Plan
- Develop an Organization Chart
- Create internal and external communication channels
- Organize the management and administration of human resources
- Organize the management and administration of financial resources
- Organize purchasing and logistics services
- Organize facilities and site management
- Organize EH&S
- **Organize other general services**

Organize Other General Services

- Implement long-term plan for new computer support requirements: hardware, storage, Cybersecurity and 24/7 network and server monitoring, wireless access points
- Migrate to Sharepoint for information technology.... enterprise information portal

Agenda

- Overview of National High Magnetic Field Laboratory (NHMFL)
- NHMFL management needs and challenges identified in 2001
- Profile of *Operations Manager, Magnet Science and Technology, NHMFL*
- Initial actions and results in response to NHMFL needs
- Analysis of Basic Business Functions and Governance
- Ongoing cultural challenges
- Lessons learned and ideas to secure a long-term future
- Summary

Ongoing Cultural Challenges

- Perceptions of administration at a Research Lab
 - An unavoidable nuisance
 - Scientific/technical staff don't want to hear about it but, ... any problems in this area must be resolved immediately!
- Administration is the one area where everyone else is an expert
- Administrative management is not currently considered a component of the management structure/project governance in NSF Cooperative Agreement/Programmatic Terms and Conditions.

External Advisory Committee

Bill Halperin, Chair
Nat Fortune, Chair Users Cmte. *ex officio*
Meigan Aronson Peter Littlewood

Agenda

- Overview of National High Magnetic Field Laboratory (NHMFL)
- NHMFL management needs and challenges identified in 2001
- Profile of *Operations Manager, Magnet Science and Technology, NHMFL*
- Initial actions and results in response to NHMFL needs
- Analysis of Basic Business Functions and Governance
- Ongoing cultural challenges
- Lessons learned and ideas to secure a long-term future
- Summary

Lessons Learned and ideas to secure a sustainable long-term future

- A comprehensive strategic plan is important for all stakeholders – where you're going, options considered, competitors and how you'll get there
- Position titles can inflate or distort lines of authority and responsibility
- Organizational charts should be convertible to flow charts and should show how the work gets done...and used to evaluate operational effectiveness
- Too many levels of management can be counterproductive
- The learning of leadership requires more than formal instruction or teaching. But, managerial skills must be learned before you can be an effective leader.

Lessons Learned and ideas to secure a sustainable long-term future

- Safe, secure and efficient operations are integral to the NHMFL's User, Magnet Technology and Outreach Programs. They make possible the scientific accomplishments and sustain trust in the lab by our funding agencies and the general public

Agenda

- Overview of National High Magnetic Field Laboratory (NHMFL)
- NHMFL management needs and challenges identified in 2001
- Profile of *Operations Manager, Magnet Science and Technology, NHMFL*
- Initial actions and results in response to NHMFL needs
- Analysis of Basic Business Functions and Governance
- Ongoing cultural challenges
- Lessons learned and ideas to secure a long-term future
- **Summary**

Summary

- We've come a long way!
- Focus the recognition and rewards on the individuals who perform the work
